Summary

Second-year Computer Science and Engineering student at Sri Shakthi Institute of Engineering and Technology, passionate about technology and driven by curiosity to create impactful solutions that solve real-world problems. Certified in full-stack development with a strong foundation in software development, currently focusing career path towards AI engineering. Founder and lead architect of DRACARYS and member of Team Alchemist.

Education

Sri Shakthi Institute of Engineering and Technology Coimbatore, India
B.E. in Computer Science and Engineering | CGPA: 7.8/10 2025 – 2029
Academics: 10th: 90% | 12th: 93.5%

Technical Skills

Languages: Python, Java, JavaScript, SQL, C/C++
Front End: HTML, CSS, React, Next.js, Tailwind CSS, Framer Motion, shadcn/ui
Back End: Node.js, Express.js, FastAPI, GitHub Webhook
Databases: MySQL, MongoDB, PostgreSQL, ChromaDB
AI / ML: Python, Scikit-Learn, TensorFlow, NLP, LLMs, RAG, PyTorch, Gemini
Tools & Platforms: Git, GitHub, VS Code, Postman, Vercel, Render, Netlify, Google AI Studio, Google Cloud, Docker

Projects

Hostel Hub – AI-Powered Security & Management System FastAPI, React, Python, OpenCV, RetinaFace, ArcFace
• Developed a distributed hostel security and management platform integrating automated perimeter vision pipelines to process live CCTV footage, log student attendance, and flag unregistered persons in real time.
• Engineered facial recognition inference using RetinaFace and ArcFace embeddings, achieving sub-second verification latency across high-density student entry checkpoints.
• Configured and benchmarked a 3-laptop distributed setup to split video ingestion, model inference, and database logging; secured 1st Place (Best Solution) at HackSprint '26.

LLM Hallucination & Response Quality Evaluator Python, FastAPI, LangChain, Pandas, NumPy
• Constructed an automated evaluation system designed to detect, measure, and mitigate hallucinations and factual inconsistencies in generative LLM responses against grounded RAG context documents.
• Implemented multi-metric scoring pipelines with NumPy and Pandas assessing faithfulness and context recall, returning structured compliance verdicts via asynchronous FastAPI endpoints.
• Added automated regression test suites to systematically benchmark prompt adjustments and model fine-tuning outputs against golden reference corpora.

TrueVault – Decentralized Identity & Asset Verification Platform React, TypeScript, Node.js, Express, PostgreSQL, Prisma, Solidity
• Built a blockchain-based digital identity and asset verification platform combining cryptographic identity proofs, ERC-721 smart contracts, RBAC, and AES-256-GCM encrypted storage for YHACK '26.
• Authored and tested gas-optimized smart contracts with cryptographic proofs to guarantee tamper-evident institutional credential issuance and verifiable ownership.
• Developed an interactive verification dashboard with React and TypeScript, allowing external verifiers to authenticate credential validity directly against the smart contract state.

SIET Academic Background Verification Portal (SIET BGV) React, TypeScript, Tailwind, FastAPI, PostgreSQL, SMTP
• Engineered an institutional web portal for Sri Shakthi Institute of Engineering and Technology to securely authenticate student academic records, degrees, and marksheets.
• Designed cryptographic email OTP verification workflows and time-expiring session tokens via automated SMTP services for authorized third-party verifiers.
• Optimized PostgreSQL database schema and indexing strategies for sub-second verification lookups, eliminating manual administrative document overhead.

Experience & Leadership

• Founder & Lead Architect, DRACARYS Tech Team: Founded a technical student collective focused on engineering hackathon solutions, collaborating on real-world projects, and advancing practical AI/ML expertise.
• Member, Team Alchemist: Collaborated on competitive national and offline hackathon platforms focusing on cryptographic identity, distributed backend architectures, and production readiness.

Achievements & Certifications

• 1st Place (Best Solution), HackSprint '26: Won first place for HostelHub distributed security platform (College Level).
• Participant, YHACK '26: Finalist submission with TrueVault decentralized identity platform (Offline National Level Challenge).
• Participant, AI Innovation Hackathon 2026: Built an AI teacher with RAG, adaptive learning, and avatar generation (Online National Level).
• Certifications: Web Developer with Python (Coursera, 2025) | Advanced Deploying Java Programming (Tecmac, 2026) | Artificial Intelligence Certification (Infosys Springboard, 2026) | Build and Deploy AI Apps (HCL GUVI, 2026).
